## Product Overview

S5800-TechNxt Series is a new generation of full-10GE TOR switches, oriented for high-performance computing, data center and high-end campuses. The S5800-TechNxt Series adopts our most advanced hardware architecture designs.

S5800-TechNxt Series (1U height) supports up to 2.56Tbps switching capacity and 48 10GE ports + 2 40GE ports + 4 100G ports or 72 10GE ports. Developed on the basis of BDROS software

platform. S5800-TechNxt Series provides high-performance L2/L3/L4 wire speed switching capacity by integrating services such as IPv6, VPN, network security, flow analysis, virtualization, with high reliable techniques including continuous forwarding, graceful restarting and loop network protection, all which works efficiency withing the S5800-TechNxt Series fabric for guaranteed maximum runtime.

S5800-TechNxt Series supports the "GreenTouch" architecture and "Smart@CHIP". Its power consumption is lower than 200W.

S5800-TechNxt series has 2 models: S5828 and S5864H.

## Enterprise-Level Layer-3 Ethernet Routing Switch Innovative BVSS (BDCOM Virtual Switch System):

virtualize multiple physical devices into one. The performance, reliability and management capabilities of the virtual system combine to outperform that of individual physical devices;

**Improved Performance:** BVSS makes full use of each link in the physical device cluster, which avoids STP blocking on links and protects the original link to the maximum;

**High Reliability:** Based on the advanced distribution mechanism and efficient cross-physical link aggregation function, the logic control plane, service control plane and service data plane are separated. Thus, the device can support continuous layer3 routing forwarding, avoiding service interruption as a result of a single point of failure;

**Easy Management:** BVSS realizes single IP management, greatly improving the networking efficiency and lowering operating costs.

## Rich Data Center Services

### VSS (Virtual Switch System)

S5800-TechNxt Series supports VSS, which can virtualize multiple physical devices into a single logical element. The virtualized system is superior to the independent physical device in performance, reliability, flexibility and management.

**Doubled Performance:** The virtualized system makes the best use of each link in the device and avoids blocking of STP to the links.

**High-reliability:** Based on the advanced distributed processing technique and the efficient function of cross-physical device link aggregation, the S5800-TechNxt Series provides non-stop layer-3 routing forwarding and avoids single points of failure.

**Flexibility:** The virtual cluster function of the S5800-TechNxt allows the distance of a cluster system to expand over up to 80KM, breaking the geographic restrictions of traditional cluster techniques.

**Easy Management:** The whole virtual system realizes single IP unified management and simplifies the management of network device and network topology.

## Security+

**Equipment-level security:** The advanced hardware infrastructure design realizes the level-based packet schedule and packet protection, prevents DoS-/TCP-related SYN Flood, UDP Flood, Broadcast Storm or large traffic attacks, and supports level-based command line protection, endowing different levels of users with different management permissions.

**Perfect security authentication mechanisms:** IEEE 802.1x, Radius and BDTacacs+.

S5800-TechNxt series supports storm/multicast/unicast limits,

ensuring normal running conditions of the equipment when deployed in harsh network conditions.

S5800-TechNxt series supports perfect ring detection mechanisms, ensuring long-term network performance stability.

S5800-TechNxt series supports port isolation within the same VLAN, DHCP-Snooping, and IP + MAC + Port binding.

## Versatile IPv6 Solution

S5800-TechNxt Series supports the IPv6 protocol suite, IPv6 neighbor discovery, ICMPv6, path MTU discovery, DHCPv6, etc.;

S5800-TechNxt Series supports Ping, Traceroute, Telnet, SSH, ACL based on IPv6; S5800-TechNxt Series supports MLD, MLD Snooping, IPv6 static routing, RIPng, OSPFv3 and BGP4+, etc.; Supports IPv6 tunnel: manual tunnel, automatic tunnel, GRE tunnel, 6to4 tunnel, ISATAP;

S5800-TechNxt Series supports IPv4 transiting to IPv6: IPv6 manual tunnel, automatic tunnel, 6 to 4 tunnel, ISATAP tunnel.

## Data Center Level High-reliability

S5800-TechNxt Series adopts HPS (Hitless Protection System). The key components of the S5800-TechNxt Series such as the power system and the fan system supports redundancy in design. All system modules support hot-swap and seamless switching without need of manual intervention.

S5800-TechNxt Series supports redundancy protection mechanisms such as STP/RSTP/MSTP protocol, VRRP protocol, ring network protection, dual uplink active/standby link protection and LACP link aggregation.

S5800-TechNxt Series supports ISSU (In-Service Software Upgrade), guaranteeing non-stop forwarding of service data while the system is upgrading.

S5800-TechNxt Series supports BFD and realizes fault detection and service recovery in seconds through linking with layer-2 or layer-3 protocol.

S5800-TechNxt Series has perfect Ethernet OAM, 802.3ah, 802.1ag and ITU-Y.1731 which can

monitor the network operating state in real time and rapidly detect and locate the malfunction.

**High Reliability (99.999%):** The MTTR of the S5800-TechNxt Series is 50ms, satisfying the requirement

for reliable delivery of Enterprise-level service.
